

passion for sports grounds

Dear customers and visitors,

Innovations for controlled artificial turf care

Optimal playability of artificial turf requires regular professional care. With the new **triangular brush DB1000F** from SMG, the even amount and distribution of the infill materials in the artificial turf surface is guaranteed and thus the best possible condition of the playing surface. The innovative tow-behind device for ride-on machines or small tractors impresses with its efficiency and easy handling thanks to the drawbar with a hitch/plate combination and two transport rollers. The working width can be extended or multiplied by two, three or more DB1000F triangular brushes by means of a traverse. Small and huge artificial turf can be cleaned and maintained easily and flexibly. For transport, storage and parcel delivery the DB1000F can be folded toolless to dimensions of 115 x 25 x 28 cm.

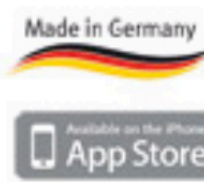

In combination with the **TurfTest TT200**, you can then immediately measure the backfill height and fiber length and check the results of your work.

- **Triangle brush DB1000F Art.-No. 6235134**
Light, robust and foldable triangle brush for artificial turf.
